STUDENT PROJECT REVIEW PRESENTATION

PERSONAL PORTFOLIO WEBSITE

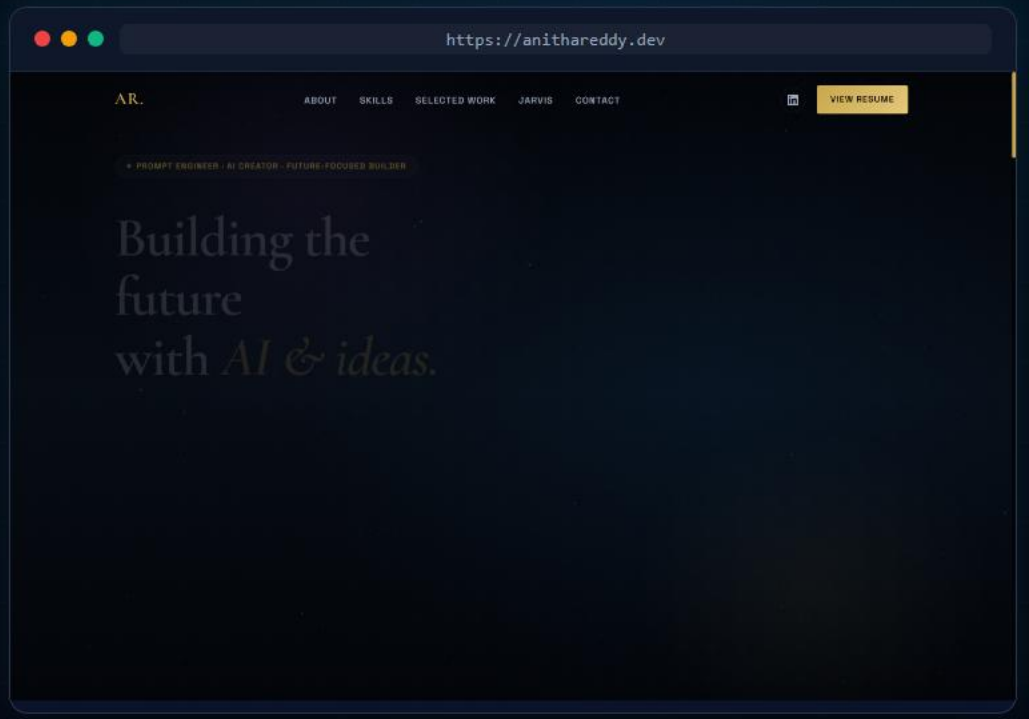

A Professional Digital Identity for Showcasing Skills, Projects & Academic Achievements

STUDENT NAME
Anitha Reddy Yerredla

DEGREE & BRANCH
B.Tech CSE

INSTITUTION
KL University

EVALUATION
Project Review / Viva

Project Overview

A personal portfolio website is a centralized digital platform to represent a developer's professional identity. It showcases skills, projects, education, certifications, and contact information, providing a professional online presence that can be shared with recruiters, clients, and collaborators.

Profile

Professional introduction, career vision, and personal branding tailored for recruiters.

Skills

Technical skills, web engineering proficiency, frameworks, and AI competencies.

Projects

Practical projects, code implementations, and interactive live software demonstrations.

Contact

Easy communication channels, messaging form, and direct networking links.

Problem Statement

Addressing the critical gaps in traditional resume formats and fragmented information channels.

01 Limited Space in Static Resumes
Traditional paper/PDF resumes provide limited space for showcasing technical work.

02 Inability to Explore Practical Work
Recruiters cannot easily explore projects and practical skills from a static resume.

03 Lack of Centralized Digital Presence
Students often lack a centralized professional online presence.

04 Information Fragmentation
Project demonstrations, certifications, and achievements are scattered across different platforms.

05 Need for Single Destination
A professional portfolio can provide a single destination for presenting a student's technical profile.

PROBLEM TRANSFORMATION VISUAL FLOW

Project Objectives

Five key objectives driving the design and development of the personal portfolio website.

01
Personal Branding
Build a professional personal online presence.

02
Skill Showcase
Showcase technical skills and projects.

03
Credentials
Present education, certifications, and achievements.

04
Recruiter Access
Provide recruiters with quick access to relevant information.

05
Responsive UI
Create a responsive and user-friendly website.

1 Identity → 2 Skills → 3 Projects → 4 Achievements → 5 Opportunities

Technology Stack

Layered technology architecture showing tools and frameworks connected across system tiers.

L1 Frontend — Core Web Languages
- <> HTML
- # CSS
- { } JavaScript

L2 Design / UI — User Experience
- Responsive Web Design
- Modern CSS Layouts
- UI / UX Principles

L3 Development Tools — IDE & Version Control
- VS Visual Studio Code
- Git Git
- GH GitHub

L4 Deployment — Cloud Hosting
- GitHub Pages — Automated Web Hosting & Live Deployment

Key Features

Major website sections mapped directly around the central website user interface.

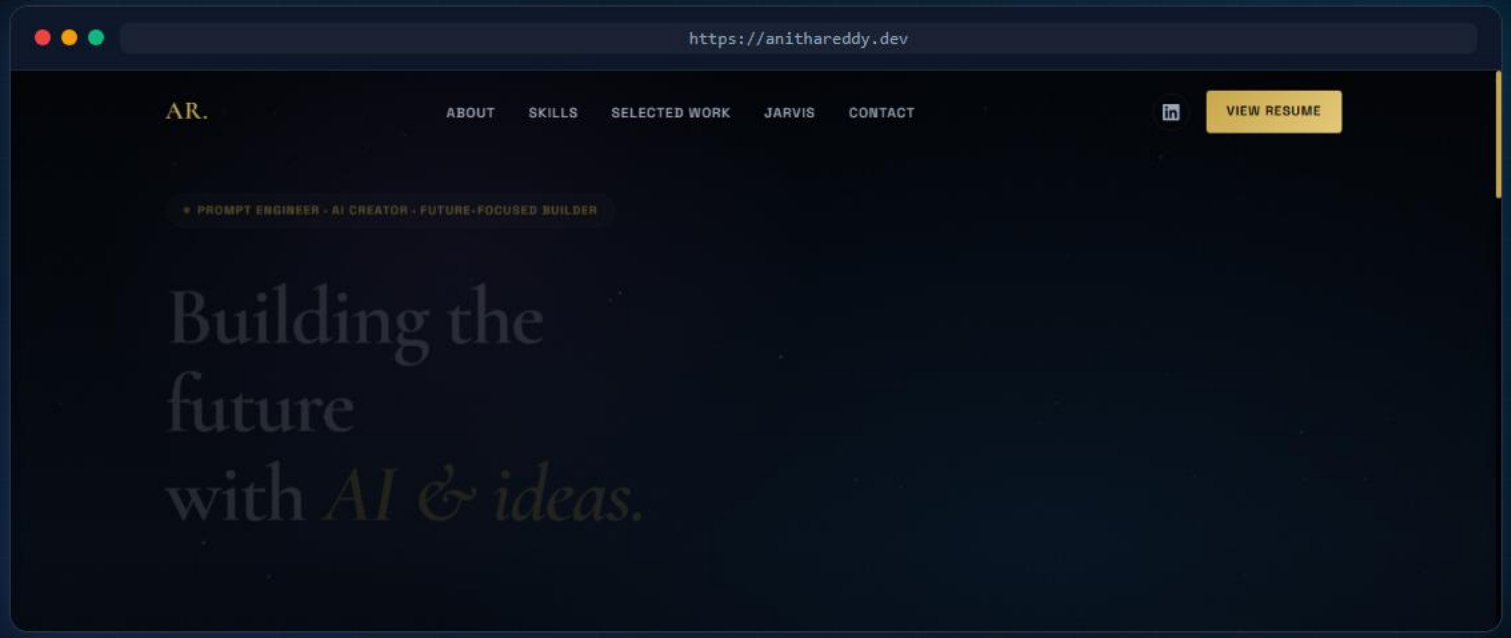

Home / Hero Section
Dynamic introduction & hero CTAs

About Me
Personal background & profile card

Skills
Technical skill cards & marquee

Projects
Selected engineering project cards

Education
Academic degree & university record

Certifications
Verified technical credentials

Achievements
Academic honors & awards

Contact Section
Direct message & contact form

Responsive Design
Seamless layout cross-device

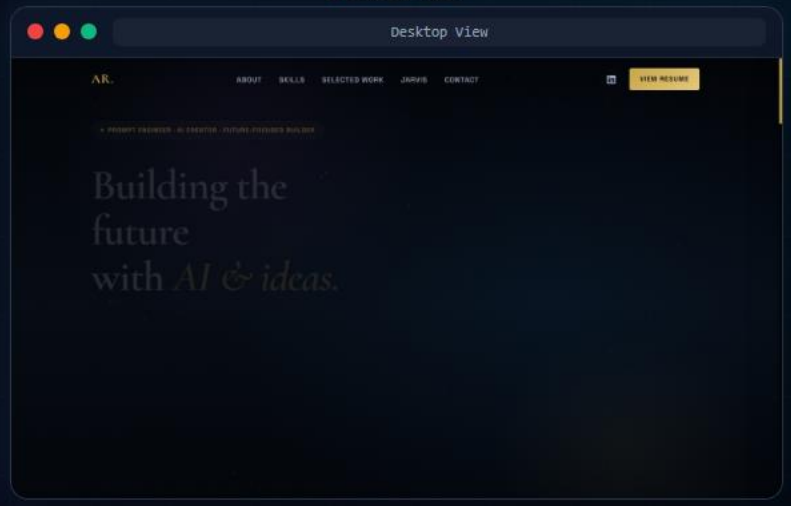

Social Links
LinkedIn & professional networking

UI / UX Design

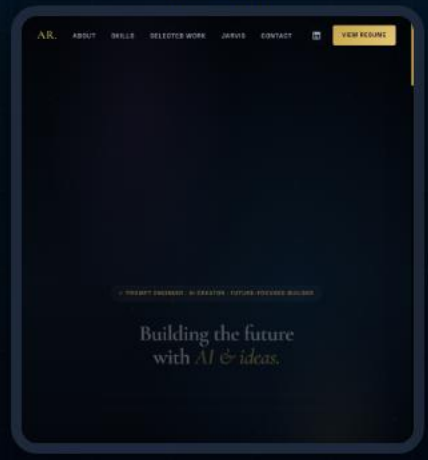

Core design principles paired with realistic multi-device portfolio mockups.

- **Clean and Minimal Interface**
  Dark mode visual balance with sleek glassmorphic containers.
- **Consistent Typography**
  Paired modern fonts for headings and readable body text.
- **Clear Navigation & Visual Hierarchy**
  Sticky navbar and clear section hierarchy for quick scanning.
- **Responsive Layout & Mobile-Friendly**
  Adapts gracefully across desktop, tablet, and mobile viewports.
- **Professional Color & Spacing System**
  Consistent padding, margins, and dark mode palette.

DESKTOP VIEW

TABLET VIEW

MOBILE VIEW

Development Workflow

The website was developed iteratively and tested extensively across different screen sizes.

Planning
↓
Requirements & sitemap definition

UI Design
↓
Visual system & layout wireframes

Frontend Dev
↓
HTML structure, CSS grid & JS logic

Content Integration
↓
Skills, projects & media assets

Testing
↓
Cross-screen & browser validation

GitHub Deployment
✓
Live hosting on GitHub Pages

VERSION CONTROL TO DEPLOYMENT FLOW

Git **Git Local**
Version Control & Local Commits
→
GH **GitHub Remote**
Cloud Repository & Code Sync
→
Live **GitHub Pages**
Automated Production Web Hosting

Project Outcome & Future Scope

Comparing current project deliverables with future enhancement roadmap.

Current Outcome

- ✓ Functional personal portfolio website
- ✓ Professional presentation of skills and projects
- ✓ Responsive user interface across screen sizes
- ✓ Centralized academic and professional information
- ✓ Easy sharing with recruiters and clients

Future Enhancements

- → Admin dashboard for content management
- → Backend / database integration
- → Dynamic project management
- → Contact form with email integration
- → Technical blog section & Analytics
- → Dark/light theme & Advanced animations

Current Portfolio Website MVP → → → Dynamic Full-Stack Web Platform (Future)

THANK YOU
